## Regular Expression:

identifiers:  $(a+\$)(\$+_+a+.+1+E)^*$  [other] for delimiter

comment: [other]  $—(anything)^*$

assignment operator: [other] = [other]

keywords:

program+begin+int+if+print\_line+end+else\_if+end+while  
[other]

number literal:  $1^*[other]$

string literal: [other] “ a\* “ [other]

punctuation - comma: [other] , [other]

statement terminator: [other];

less than operator: [other] < [other]

left parenthesis: [other] ( [other]

right parenthesis: [other] ) [other]

multiplication operator: [other] \* [other]

plus operator: [other] + [other]

# NFA and DFA

a : letters  
1 : numbers

NFA

DFA

comment :

left/right parenthesis, = + \* < operators, comma  $\Rightarrow$  OP

statement terminator

number literal :

String literal

## Output results:

### input1.txt

```
